

LIGHTING KITS

FOR THE FORD TRACTOR

INDIVIDUAL OR COMBINED KITS TO FIT ALL FARM JOBS

8N-13109 KIT (HEADLAMP)

The new Headlamp Kit Assembly makes it possible for the Ford Tractor owner to purchase, if desirable, only the Headlamp Assembly that includes wiring harness, switch and complete mounting equipment.

This kit might be compared with an extra worker that enables the tractor to work night as well as day in the short spring planting season or during harvest. Kit is painted in tractor gray.

8N-18275 IMPLEMENT LAMP KIT ASSEMBLY

The new Implement Lamp Kit Assembly is the answer to popular request for a rugged rear mounted lamp on the left fender with a flood beam instead of a spot beam. This lamp is smaller in size than the Headlamp and can be easily adjusted for plowing, planting or for Combine work. Shipped complete with built-in switch, bracket and wiring harness to connect to the Headlamp Kit.

8N-13404 TAIL LAMP ASSEMBLY

The Tail Lamp Assembly is a low cost safety device for the safe operation of Tractors on the roads or highways at night. Don't endanger yourself or others when traveling with the Tractor and equipment after dark. This Tail Lamp mounts on the implement light bracket and wire hooks into the implement lamp wiring harness.

Some states require a license on all tractors, and other states on tractors doing highway work. This bracket mounts on the back of the amber tail light.

8N-13406 LICENSE BRACKET
