CASE VAC - 301 - 311

Never before has a full one-bag or 1½ bag mixer been available at this low, low price. The TRANSMIX patented features eliminate gears completely and allow the mixer to be dumped hydraulically. The barrel is turned by friction from a power take off extension to a standard 6.70 x 15 tire attached to the mixer barrel. The hydraulic mechanism on your tractor raises the rack and barrel to an almost perpendicular position, allowing the mixture to flow easily out of the barrel.

Just one implement shed floor, barn floor or feed lot will save the entire cost of the mixer. The full one-bag capacity (when mixed 5 to 1) makes TRANSMIX a professional unit capable of continuous operation up to 1500 cubic feet per day.

The new engineered and proved fins in the mixer barrel make cleaning so simple that the TRANSMIX can be ready in minutes for other mixing jobs after having been used for cement. Tire is not included with mixer. Any used 6.70 x 15 tire is sufficient.

TRANSMIX UTILITY MIXER

- Mixes while transporting
- Dumps hydraulically with tractor stationary or in motion
- Attaches to your tractor in minutes
- Absolutely no holes to bore
- Comes complete with all bolts and nuts
- Unconditional guarantee

GUARANTEE

Guaranteed not only against workmanship and material, but must give satisfaction. If not satisfied in thirty days, return Transmix and your money will be refunded.

1. A 1 or 1½ bag mixer at 5-to-1 ratio.
2. All-steel mixer barrel made from ¼" plate.
3. Mixing barrel—28" in diameter, 42" long.
4. Height of mixing barrel opening when being loaded, 43" (approximate).
5. Height of mixing barrel in dump position, 26" (approximate).
6. Mixer barrel rolls on rubber.
7. Mixer barrel powered by friction.
8. Power takeoff extension has its own bearing to take the weight of the mixing barrel and barrel load.
9. Dumps from hydraulic arms on your tractor.
10. Weight of mixer, plus power takeoff, approximately 240 lbs. to 350 lbs. 6.70 x 15" tire and tube not furnished.
11. Time for installing first time, one-half hour; after mixer has been installed the first time, 6 to 10 minutes is required to remove or install.
12. IHC-H&M do not require 3-point hitch. Dumping cylinder and arms supplied.

Mixes · Transports · Dumps Hydraulically

TRANSMIX...powered by your tractor...is the mixer with 101 profit-making uses on the farm! **MIXING CEMENT?** Transmix handles one bag at 5-to-1 per batch...with power from your tractor! A batch of cement can actually be mixed while Transmix is traveling 25 feet! **TRANSPORTING?** Transmix truly has it! Think how much labor it will save you to be able to mix and transport with the same unit. You can mix while Transmix is moving...or mix while it is stationary! You can transport cement as far as needed from water or sand supplies. You can transport five cubic feet on rough ground in road gear with the mixer barrel stationary or turning. The amazing new Transmix will easily transport and dump 50 gallons of water, six cubic feet of dirt, manure, silage, or other materials. **OTHER USES?** When not pouring concrete, Transmix does yeoman's duty in mixing stock feed or silage. Farmers say it's the best thing yet for tempering seeds. No wonder users insist that Transmix is the most versatile low-cost utility mixer offered today.

FAST? Sure. When Transmix operates at top speed, four men are required. But it's so simple that one man does the job at a slower speed.

TRANSMIX does it all

the only mixer on the market with all of these features

TRANSMIX

- Full 1 or 1½ Bag Capacity
- Dumps Hydraulically in Vertical Position
- Special Mixing Fins Allowing You to Clean in Seconds
